

Introduction to Machine Learning

Machine Learning (ML) is a field of computer science that gives computers the ability to learn from

Types of Machine Learning

1. Supervised Learning: The model learns from labeled data and makes predictions.
2. Unsupervised Learning: The model finds patterns and relationships in unlabeled data.
3. Reinforcement Learning: The model learns by interacting with an environment and receiving feedback.

Common Algorithms

- Linear Regression
- Decision Trees
- Support Vector Machines
- K-Means Clustering
- Neural Networks

Example Application

A common application of machine learning is email spam detection. The system learns from examples of spam and non-spam emails to identify patterns and predict whether a new email is spam.

Conclusion

Machine Learning is a powerful tool that enables systems to improve automatically through experie
